Infrastructure quotation

Paid things you have to buy to run the platform. **Not included:** developer salary, design, legal/broker licence, or MatchTrader/Fintech360 white-label.

Quote ID: SPV-INF-2026-001 **Date:** 5 Oct 2026 **Currency:** USD **Validity:** 30 days.
Prices are public list estimates (vendors change them). Add local VAT/GST. Shared cPanel hosting is **not** enough for live charts + WebSockets — you need a VPS.

A. Must buy for MVP (build + demo, first 1–3 months)

This is enough to develop, demo to the client, and run demo trading with crypto prices (Binance public feed is free).

Item	Vendor (typical)	What it is	Billing	Est. cost
Domain .com	Namecheap / Cloudflare Registrar / Porkbun	brand.com + api. + optional trade. as DNS records, not extra domains	Yearly	**$12–20 / yr** renewal ~$18
DNS + SSL + CDN + DDoS	Cloudflare Free	Nameservers, HTTPS, cache marketing site, hide origin IP	Monthly	**$0**
VPS / server	Hetzner Cloud CX33 4 vCPU / 8 GB / 80 GB	Runs Next.js + NestJS + Postgres + Redis + worker in Docker. This is your hosting.	Monthly	**$10–13 / mo**
VPS backups / snapshots	Hetzner backups	Nightly snapshot of the server	Monthly	**$2–4 / mo**
Extra disk (optional)	Hetzner volume 40–80 GB	Only if DB + KYC grow on disk. Prefer R2 for KYC.	Monthly	$0–4 / mo
KYC file storage	Cloudflare R2	Passport/ID uploads. 10 GB + ops free. You will stay on free for a long time.	Monthly	**$0** (free tier)
Transactional email	Resend Free (or SMTP)	Login, reset password, KYC mail. 3,000 emails/mo, 100/day.	Monthly	**$0**
Business mailbox (optional)	Zoho / Google Workspace / Cloudflare Email Routing	info@ / support@ human inbox. Routing to Gmail can be $0.	Monthly	$0–12 / mo
Market data (demo)	Binance public WebSocket	Crypto ticks for charts. Fine for MVP. Not licensed FX.	—	**$0**

MVP monthly (typical): $12–20

MVP year 1 (incl. domain): ~$160–260

B. Must add before real users / live-looking FX (launch)

Buy these when you leave demo: more RAM for WebSockets, a paid FX/stock feed, and email that is not capped at 100/day.

Item	Vendor (typical)	Why you pay	Billing	Est. cost
Bigger VPS	Hetzner CX43 8 vCPU / 16 GB	Charts + many sockets. Or keep CX33 until it actually hurts.	Monthly	**$18–22 / mo** (replaces MVP VPS)
Alt: DigitalOcean / Linode 8 GB	DO / Akamai	Easier cards in PK/IN if Hetzner billing is painful. More expensive.	Monthly	$48 / mo
Market data (FX + indices)	Twelve Data Grow/Pro or Finnhub paid	You cannot legally/reliably stream EURUSD live from a free toy API for a commercial site. This is the expensive line item.	Monthly	**$29–99 / mo** start Grow $29–79; Pro ~$99 if many symbols
Email Pro	Resend Pro	50k mails, no 100/day cap. Needed once you have real clients.	Monthly	**$20 / mo**

Item	Vendor (typical)	Why you pay	Billing	Est. cost
Company mailboxes	Google Workspace	2–5 people: support, admin. Zoho is cheaper.	Monthly	$6–12 / user
R2 overage	Cloudflare R2	Only after 10 GB KYC. $0.015/GB. Still tiny.	Monthly	$1–5 / mo
Error monitoring (optional)	Sentry Team	Crash alerts in production. Skip until launch.	Monthly	$0–26 / mo
Cloudflare Pro (optional)	Cloudflare	WAF extras. Free is enough at start.	Monthly	$0–20 / mo

Launch monthly (Hetzner + Twelve Data Grow + Resend Pro + 2 mailboxes): ~$70–130

Launch year 1: ~$850–1,600 If you pick Twelve Data Pro $99 + DO $48 VPS: ~$1,800–2,200 / yr

C. Payments — not a monthly hosting bill, but you still pay

Phase 1 of the build uses **admin recharge** (you credit the client by hand). A real card/UPI gateway for a CFD broker is high-risk. Stripe often **refuses** forex/CFD. Budget this separately from VPS.

Item	Notes	Cost
Admin credit (v1)	No vendor. You type amounts in admin. Recommended until KYC + ledger work.	$0
Stripe / PayPal (if approved)	Unlikely for CFD. If you get it: ~2.9% + $0.30 per charge. No monthly minimum.	% of volume
Crypto (USDT) deposit	Wallet + processor (NOWPayments, CoinGate, etc.). Fees ~0.5–1.5%. Easier than cards for this niche.	% of volume
Local UPI / JazzCash / Easypaisa / Jazz	Need a Pakistan/India merchant company. Setup + MDR. Not a $20 SaaS.	Ask the bank / aggregator
High-risk card processor	Forex PSPs (Praxis-class). Setup often thousands USD + rolling reserve + monthly. This is what Spova uses via Fintech360.	$2,000–20,000+ setup; monthly $0–2,000+

D. Do not buy (waste for this project)

- **Shared hosting / cPanel / Hostinger website plan** — cannot run Docker, Redis, WebSockets properly.
- **AWS/GCP from day 1** — you will spend $150–400/mo by accident. Hetzner first.
- **Kubernetes, load balancers, extra domains** (spova-trade.com etc.) — one domain, subdomains.
- **TradingView Charting Library licence** — Lightweight Charts is free. Paid TV library is for later if legal requires it.
- **MatchTrader / Fintech360 / MetaTrader white-label** — $5k–50k+/yr typical. Only if you stop building and rent a broker stack.
- **Anjouan / broker licence** — legal, not hosting. Required only if you take real client money as a broker. Separate lawyer quote.

E. Recommended cart (what to actually pay this week)

Buy now	Qty	Unit	Year 1
.com domain (Cloudflare Registrar or Namecheap)	1	$15–18	$18
Hetzner CX33 VPS (8 GB) + backups	12 months	~$14/mo	$168
Cloudflare Free + R2 Free + Resend Free	—	$0	$0
Total to start development			**~$186**

Add at launch	Qty	Unit	Year 1 extra
Upgrade VPS to 16 GB (replace CX33)	12 months	+$8–10/mo	+$100
Twelve Data Grow (FX/crypto/stocks quotes)	12 months	$29–79/mo	$350–950
Resend Pro	12 months	$20/mo	$240
Google Workspace x2	12 months	$12/mo	$144
Launch extras year 1			**~$830–1,430**

Honest summary: Hosting is cheap (~$15/mo). The thing that actually costs money is **market-data licensing** (~$30–100/mo) and later a **payment processor** (fees or a large high-risk setup). If someone quotes you $200/mo 'hosting' for this MVP, they are padding or putting you on AWS too early.

This quote covers only paid infrastructure/SaaS. Development time is a separate commercial quote.
