General Fees

Every charge that can apply to an account beyond the spread.

1. Spreads and commissions

The main trading cost is the spread between the bid and ask price, which varies by instrument and account type and widens in volatile or illiquid conditions. Some account types charge a commission per lot instead of, or in addition to, a wider spread. Current typical spreads and commissions are published on the account-type pages of the website and inside the terminal (Symbol info).

2. Overnight financing (swaps)

Positions held past the daily rollover time are charged or credited a swap in points or as a percentage, per instrument and per direction. Rates are shown in the terminal and on the Swap fees page. A triple swap is applied once a week to account for the weekend, on the day shown for each instrument.

3. Deposits

The Company does not charge for deposits. Your bank, card issuer, payment provider or blockchain network may charge its own fee, which is deducted before the funds reach us. Currency conversion, where a deposit is made in a currency other than the account currency, is applied at the rate of the day.

4. Withdrawals

Withdrawals by bank transfer, UPI and Binance Pay are free of Company charges; blockchain withdrawals bear the network fee. The receiving bank or provider may charge its own fee. Withdrawal requests are processed within the times published on the Platform once verification is complete.

5. Inactivity

An account with no trading activity for twelve consecutive months may be charged an inactivity fee of up to 10 USD per month, deducted from the balance. No fee is charged on a zero balance and the fee stops as soon as trading resumes.

6. Other charges

Chargebacks or returned payments caused by the client, and any costs the Company incurs to recover amounts you owe, may be passed on. The Company reserves the right to change this schedule by publishing an updated version; changes take effect on the date stated.

This document forms part of the Legal Documents of Zerventa. The current version is always the one published at /legal on the website. CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage.
